Outline

- ALMA band 9 technology
- Results of >64 ALMA cartridges
- Use of ALMA mixers in FPA (CHAMP+)
- 2SB mixer technology

Main band 9 specification

- RF band 602-720 GHz
- DSB mixing scheme
- IF band 4-12 GHz (8 GHz bandwidth)
- 4 dB IF pass band ripple
- 10^{-8} relative total power stability @ 1s
- Sensitivity integrated over IF: 175 K (80% band)
240 K (20% band)
- Dual polarization
- -20 dB cross - polarization response
- Gain compression within 3% @ 400 K load
- Phase stability
- No moving parts
- Large amount of receivers

Band 9 cartridge layout

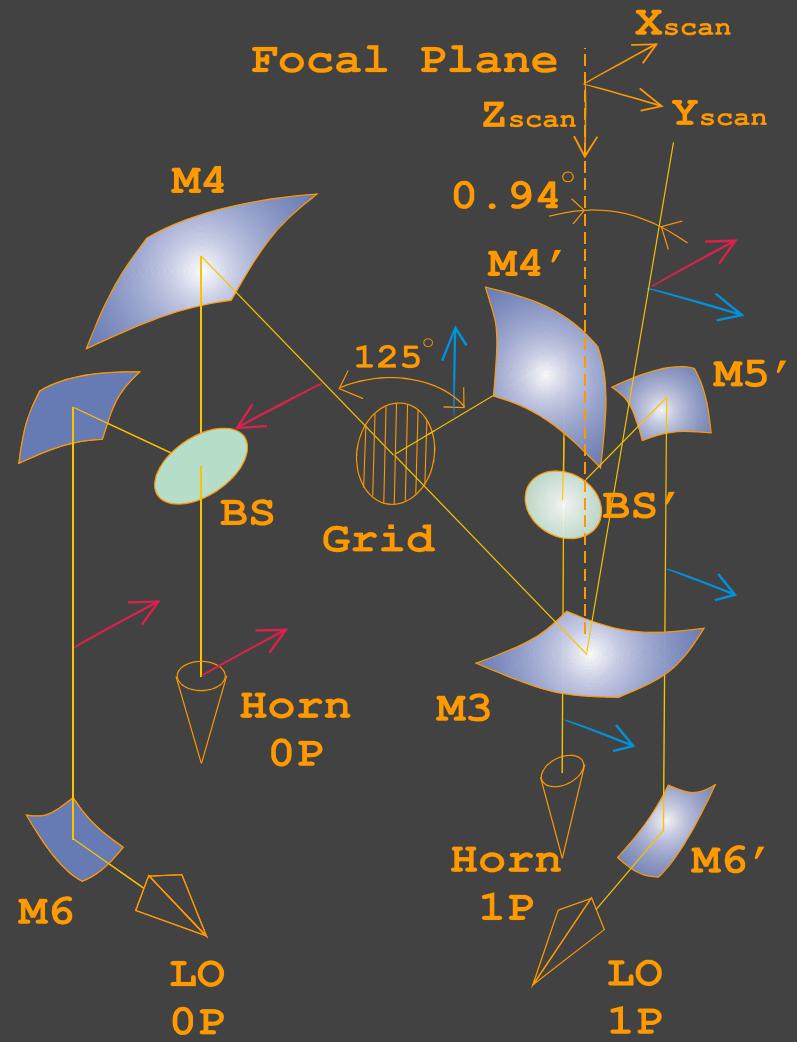

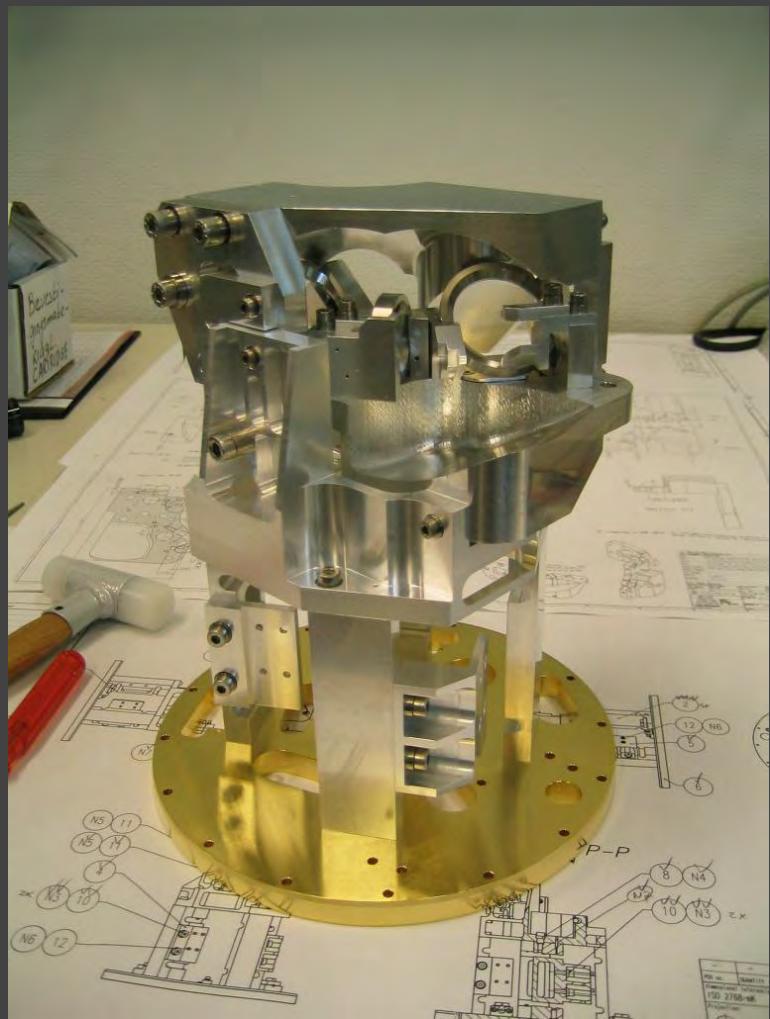

2004

2006

Cartridge Optics Layout

SIS mixer

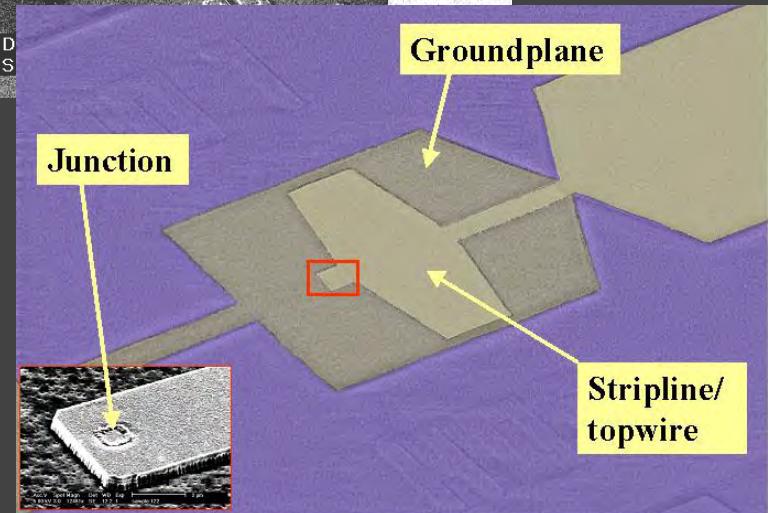

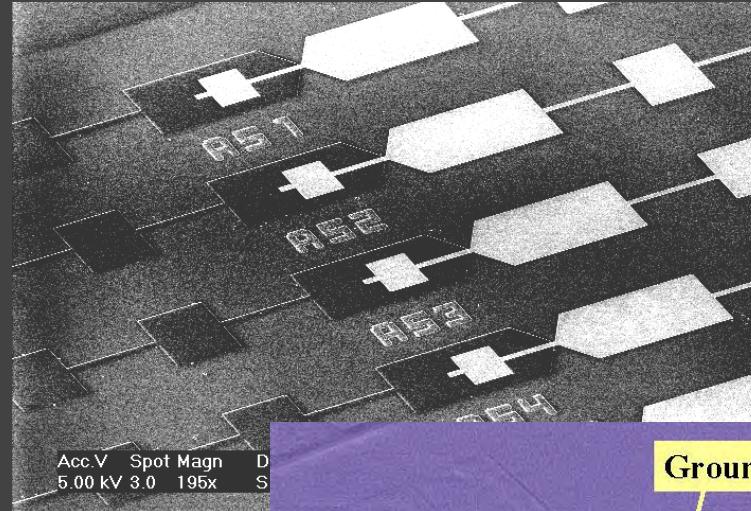

Simple construction
Easy to assemble

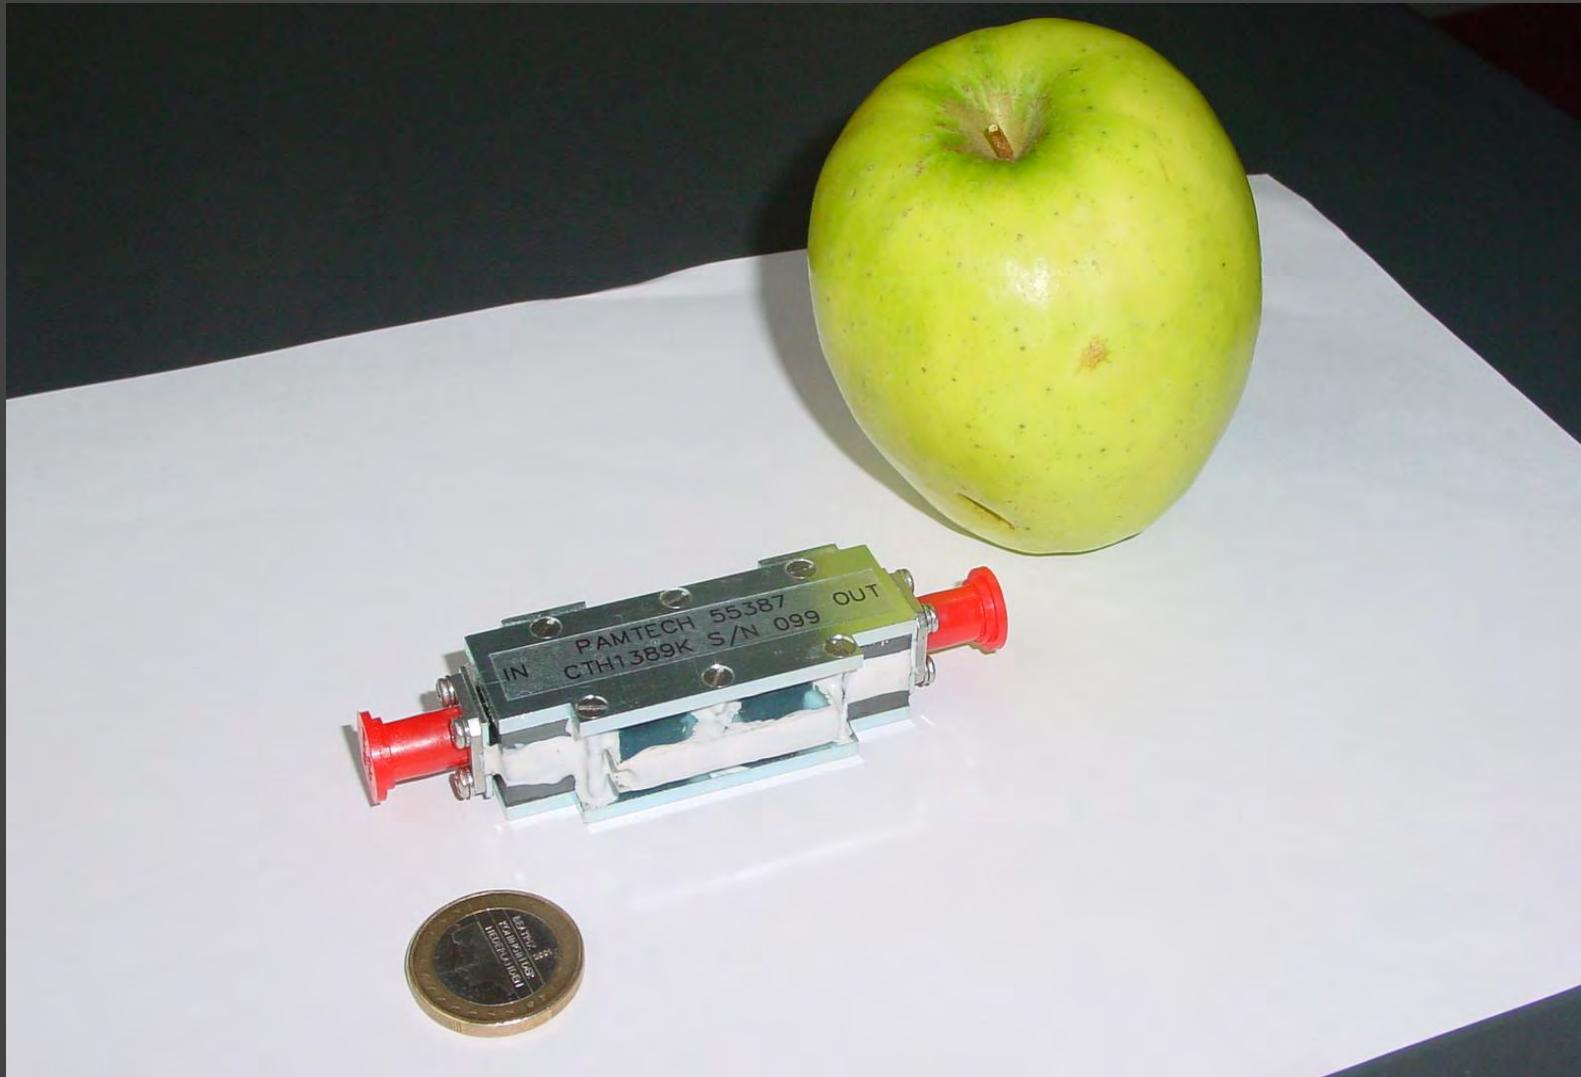

SIS Technology

- THz SIS mixers
 - quantum-limited sensitivities
 - 600-720 GHz bandwidth
 - LO tuning range
 - 4-12 GHz IF bandwidth
 - 4-8 GHz in HIFI
- SIS junctions (TU Delft)
 - Nb SIS technology
 - optimized fabrication
 - larger quantities
 - improved pattern accuracy
 - 1 μm structures are 1 μm
- waveguide device mounts
 - optimized for series production
- corrugated horn antennas (RPG)
 - commercial product
 - 100 μm structures +/- 5 μm

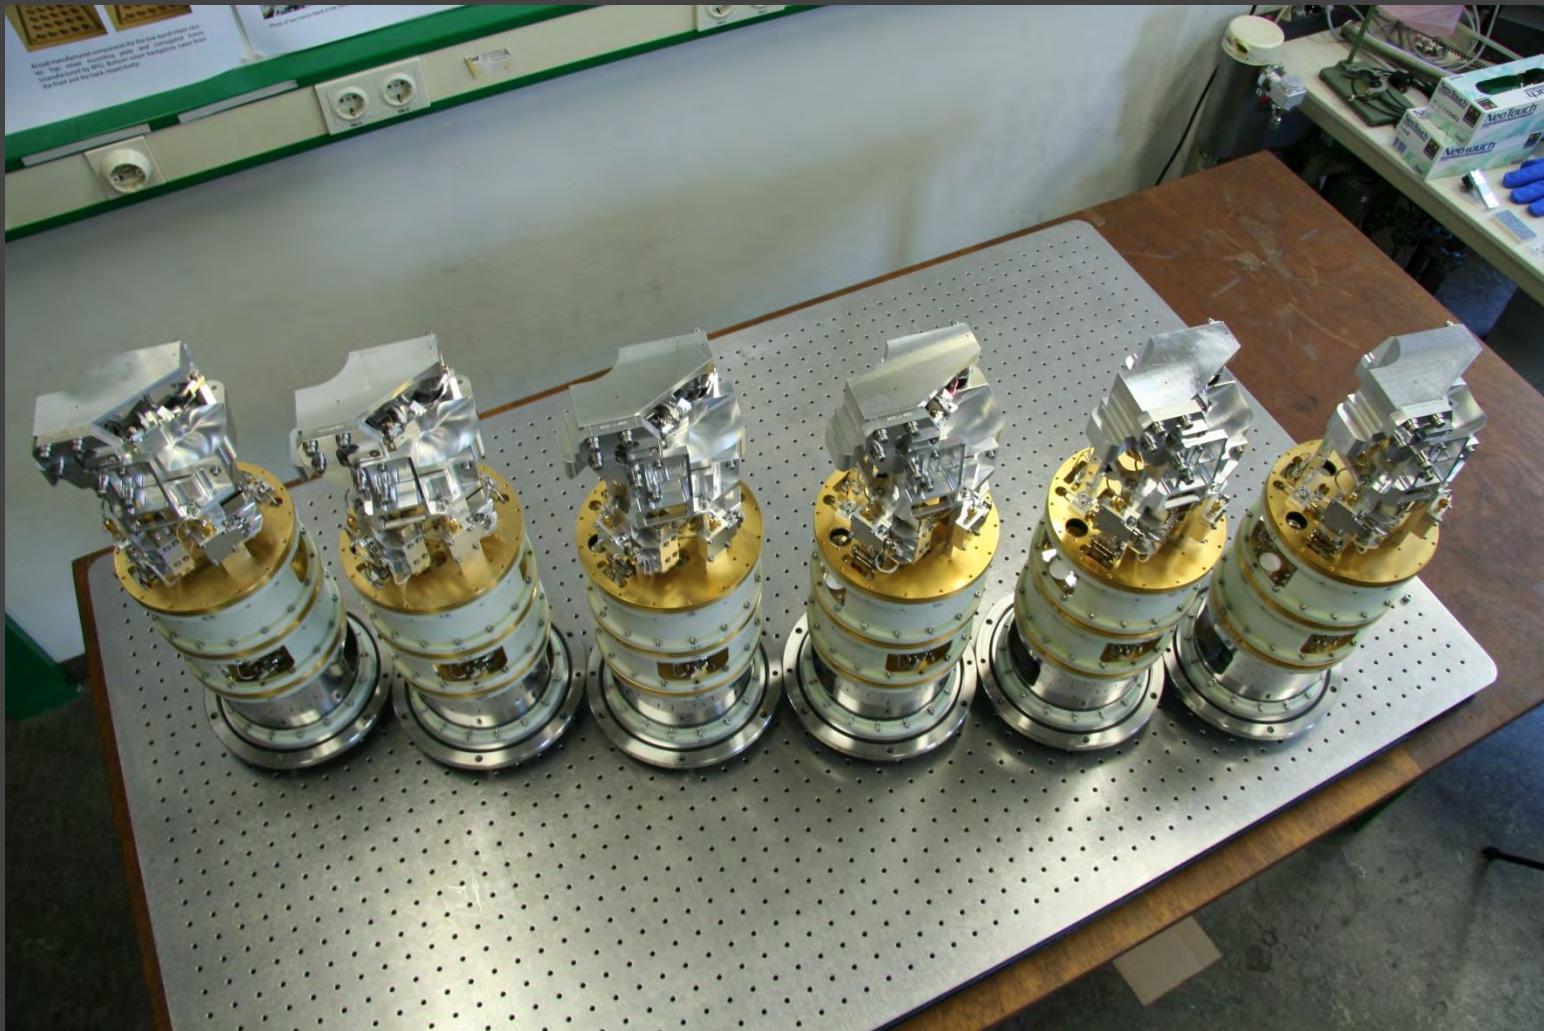

SIS Junctions (TU Delft)

4-12 Cryogenic isolator

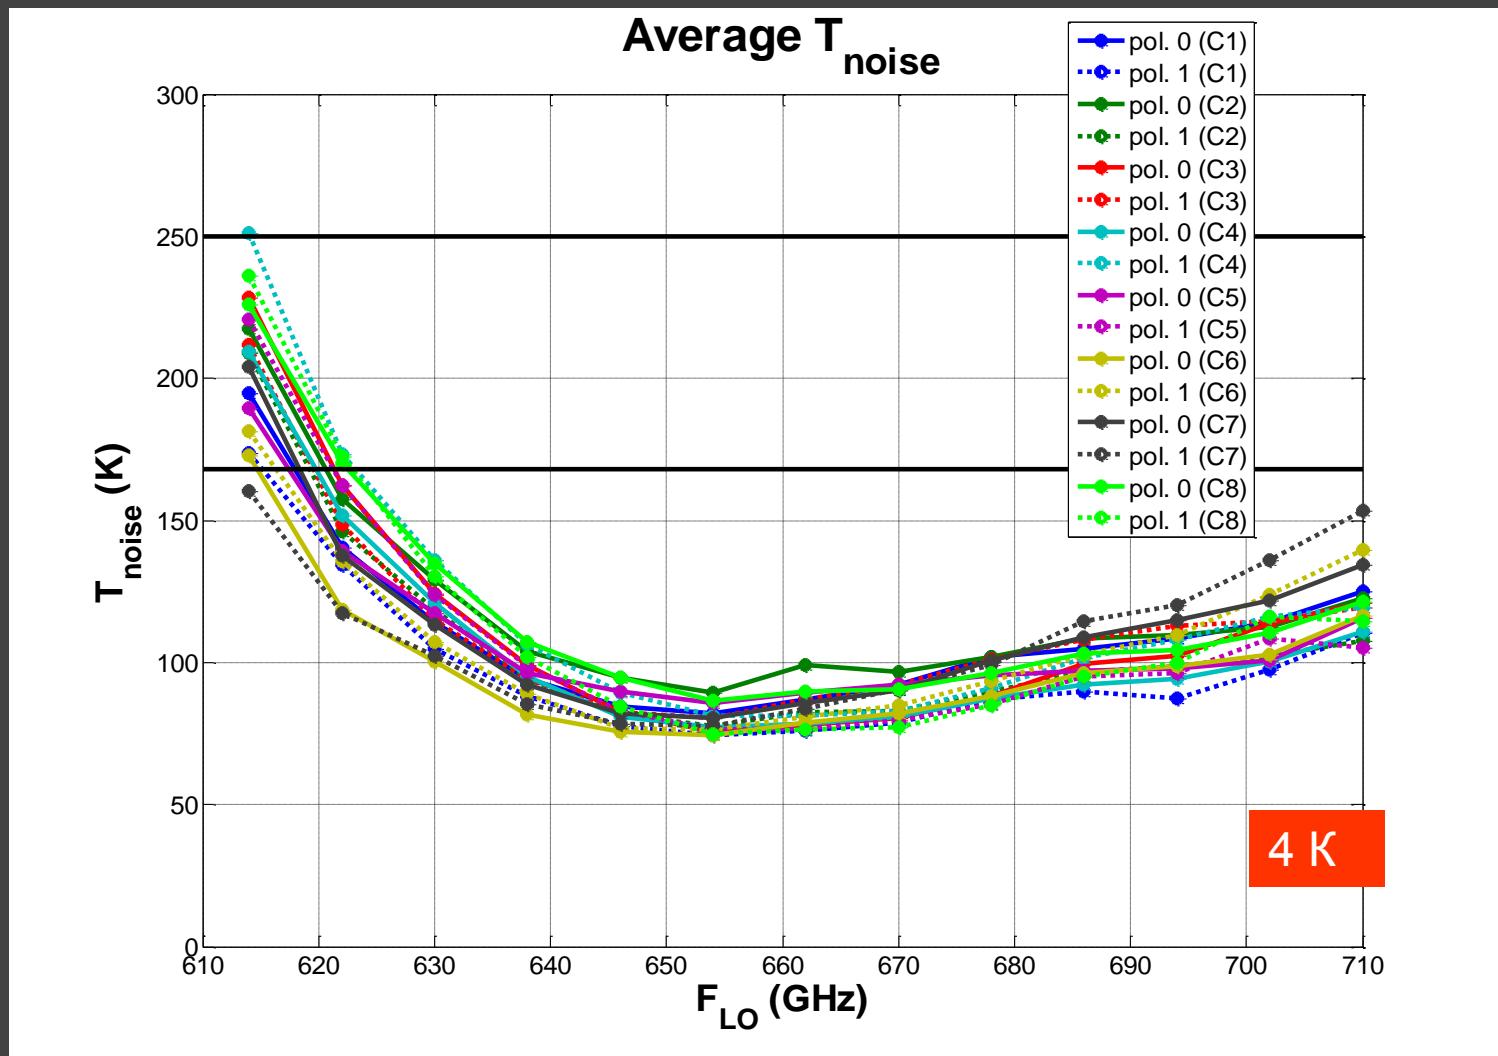

8 cartridges

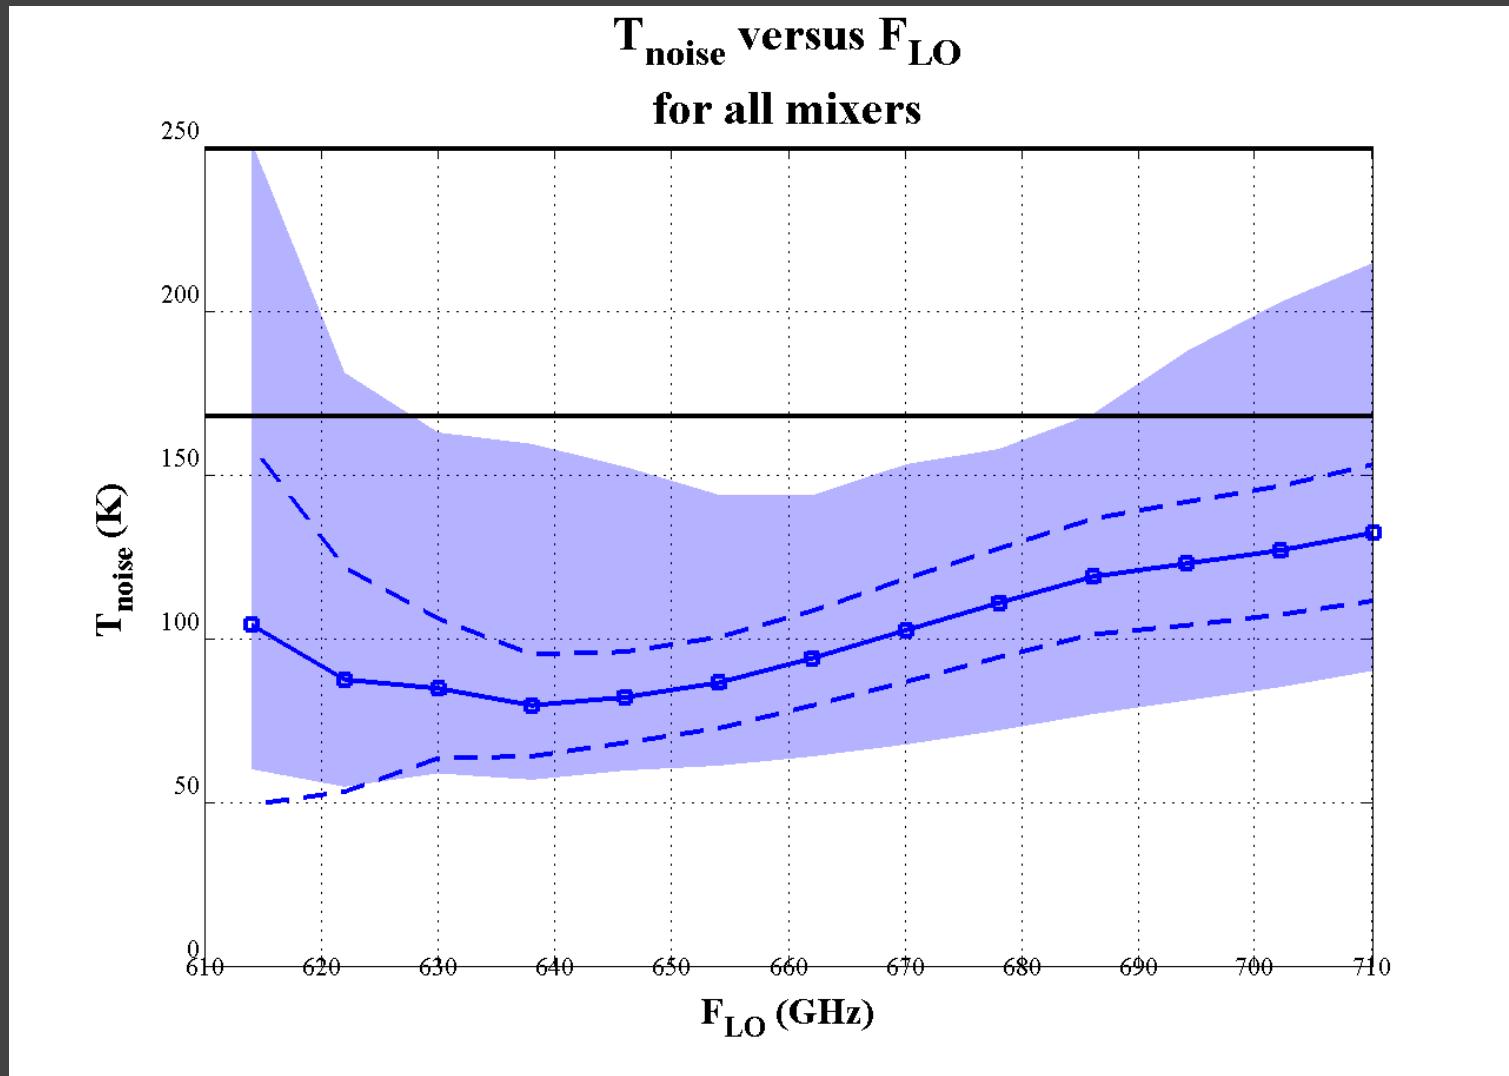

ALMA 2012

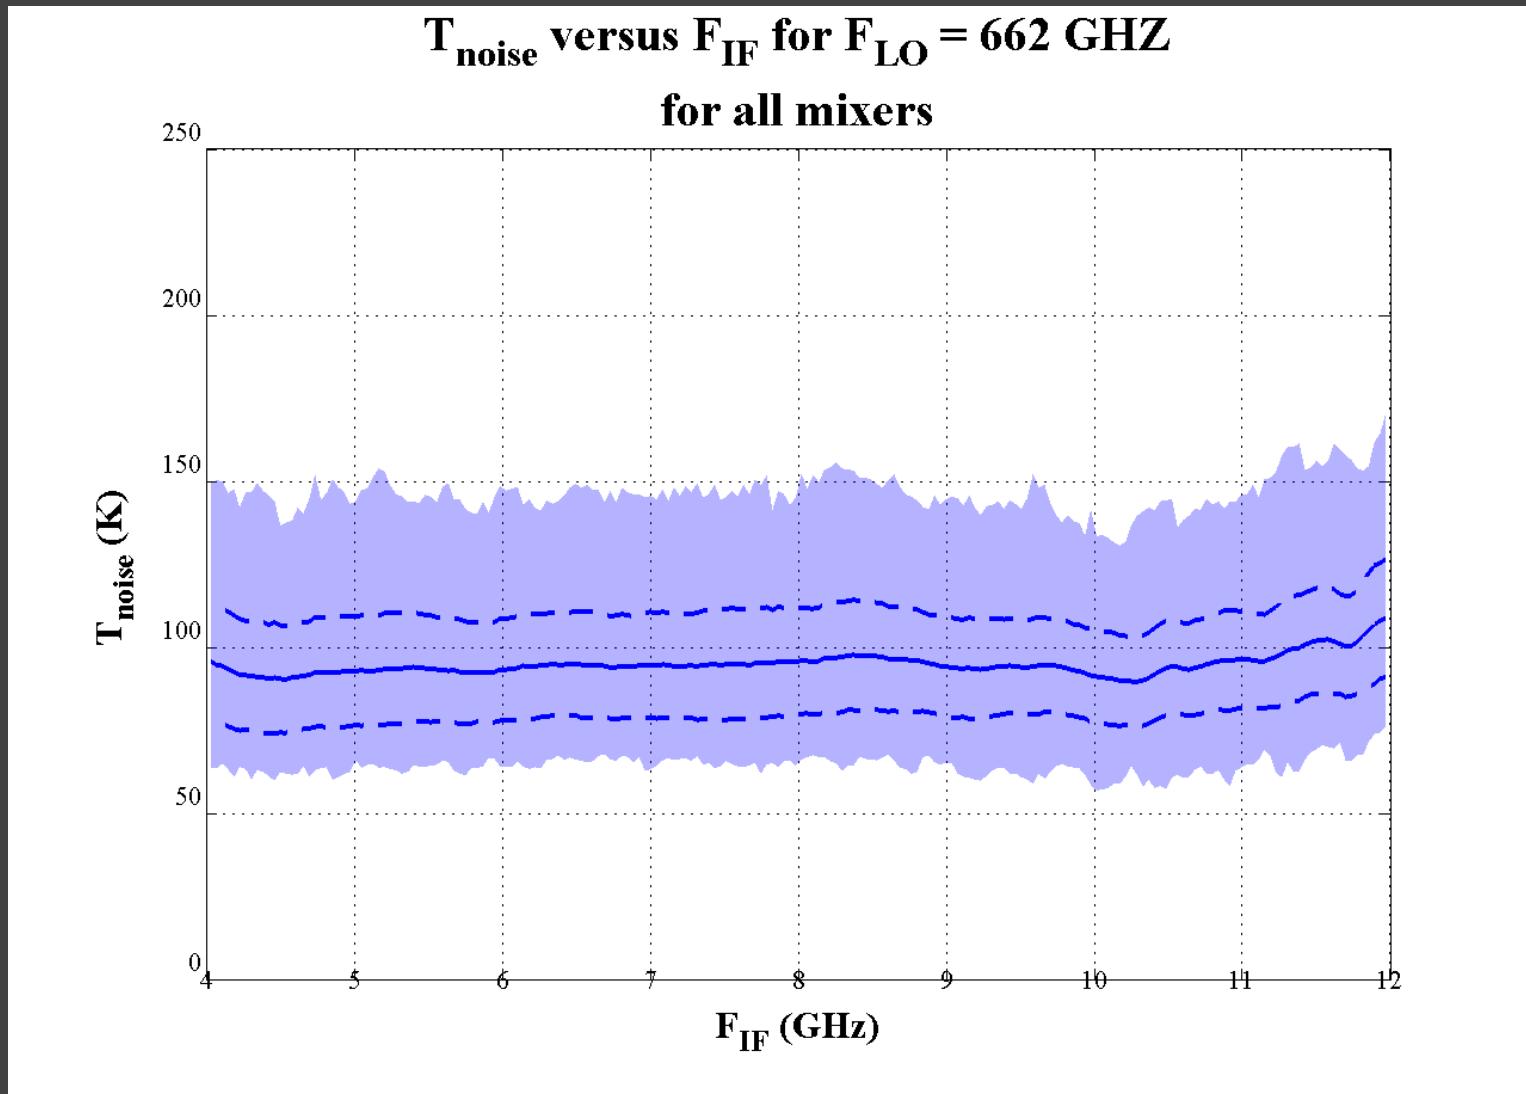

Noise temperature #1..#8

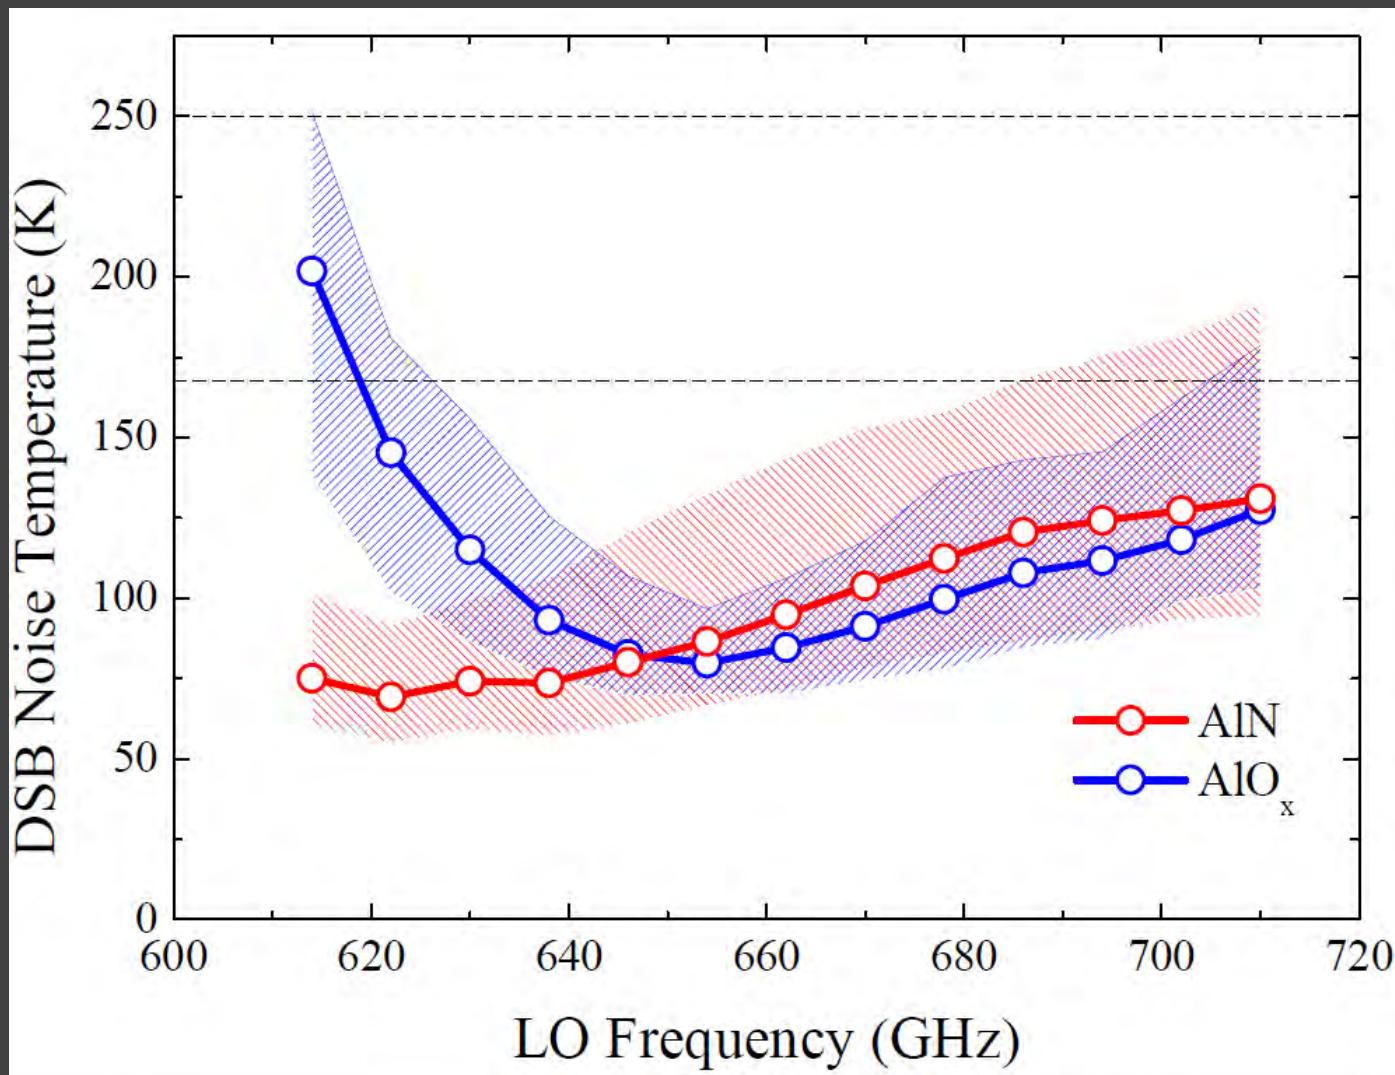

Noise temperature for 64+ cartridges

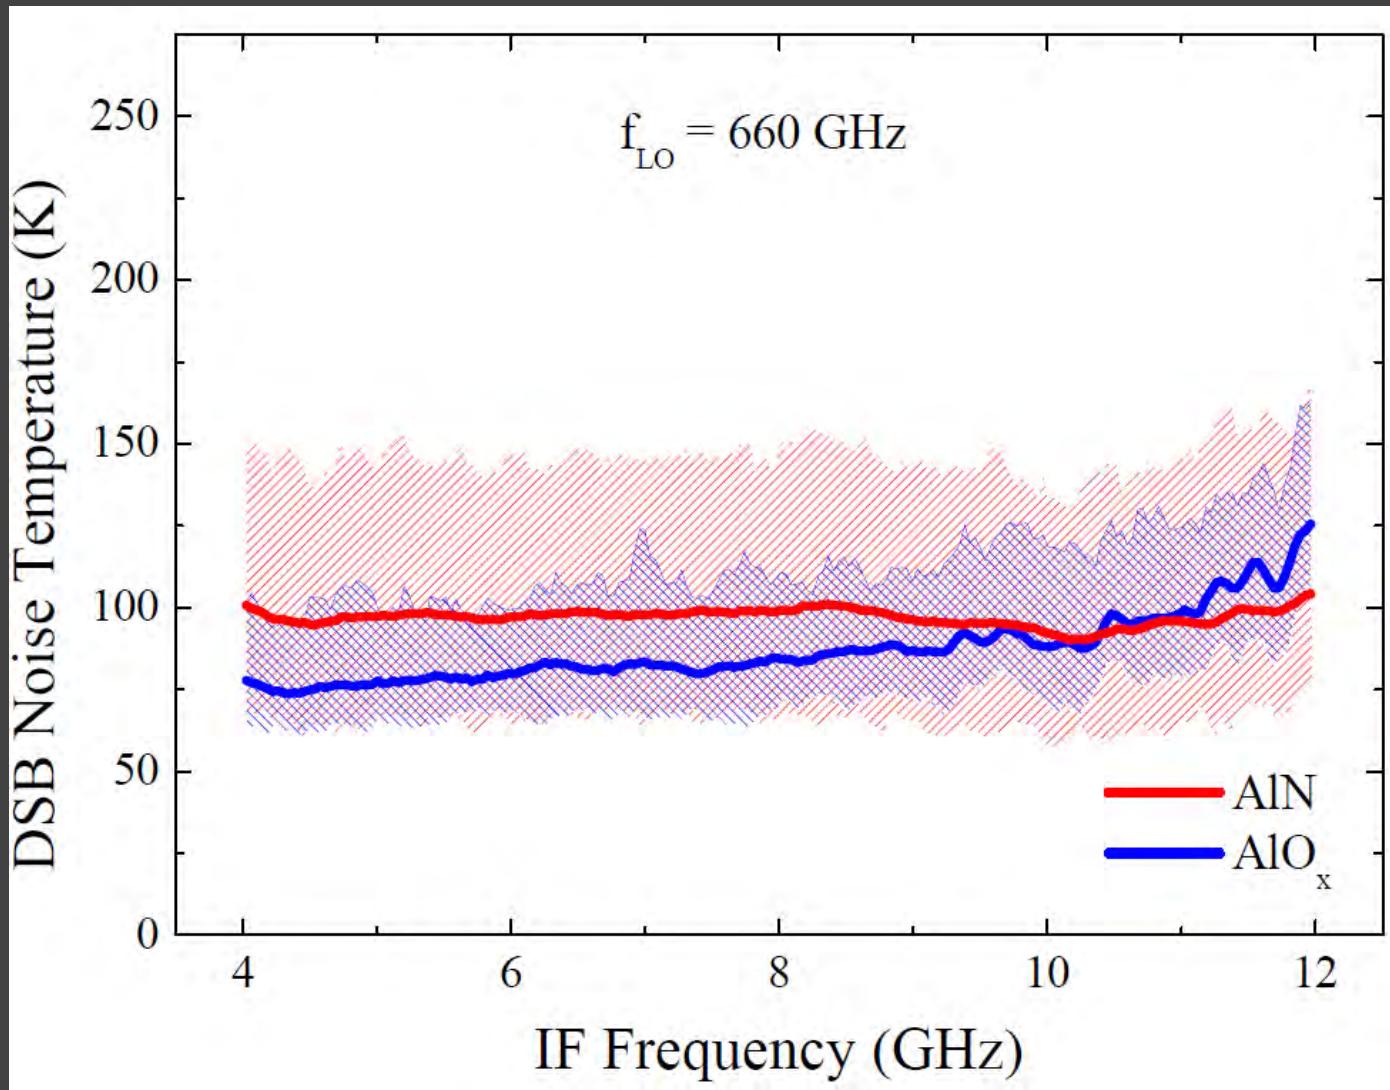

Noise temperature for 64+ cartridges

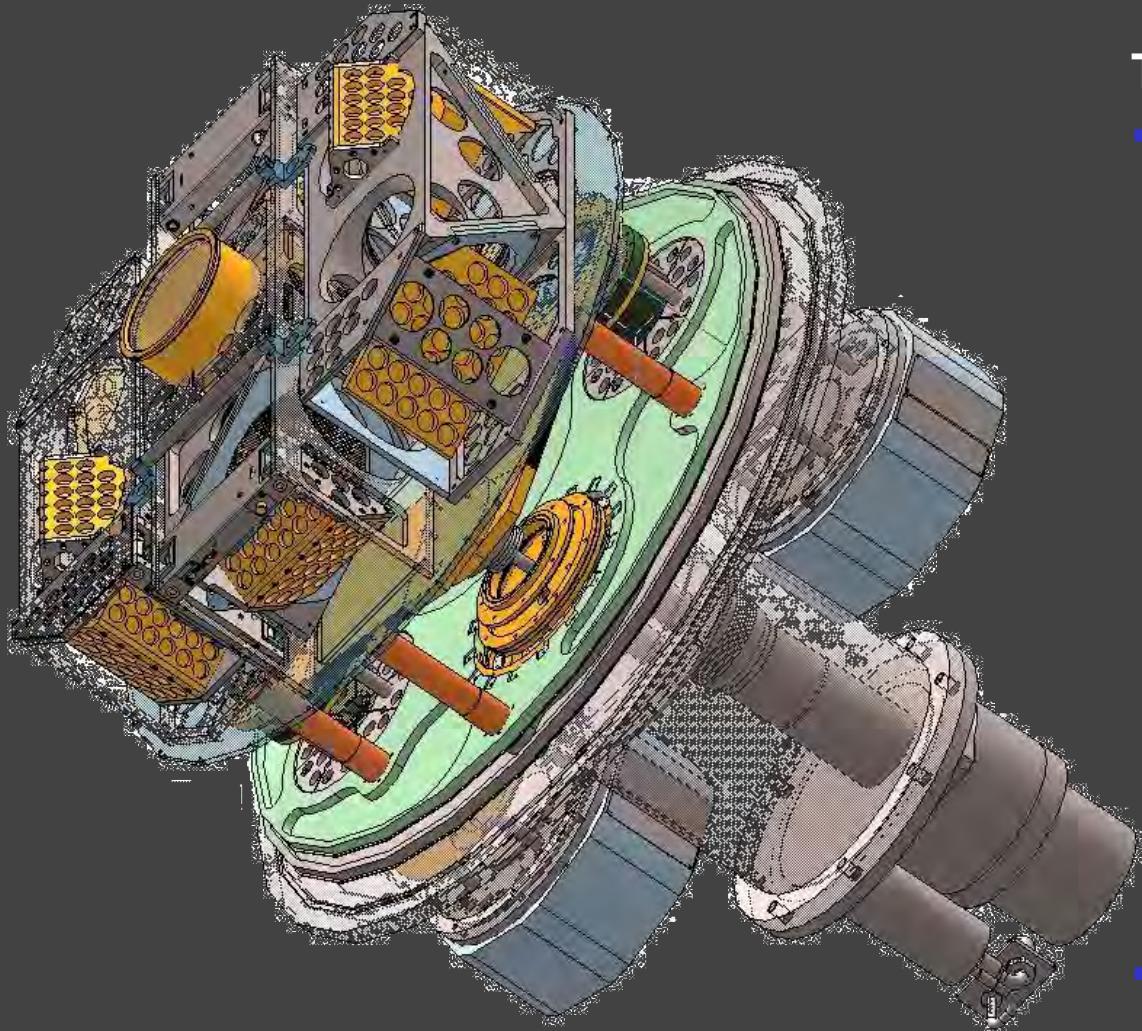

T_{noise} vs LO per junction technology

T_{noise} vs IF

CHAMP+: A powerful sub-millimeter heterodyne array

- Mixer development (SRON)
 - A. Baryshev (SRON)
 - T.M. Klapwijk (TU Delft)

APEX

Max-Planck-Institut
für Radioastronomie

Telescope:

Location: Llano de Chajnantor,
northern Chile

Coordinates: Latitude : $23^{\circ}00'20.8''$
South

Longitude : $67^{\circ}45'33.0''$ West

Elevation : 5105 m

Diameter: 12 m

f/D: 8

Beam width:(FWHM) $7.8'' * (800 / f [\text{GHz}])$

Main reflector: 264 aluminum panels,
average
panel surface rms 5 micron

Surface accuracy: 17 micron rms

Pointing accuracy: 2" rms over sky

Mounting: Alt-Az

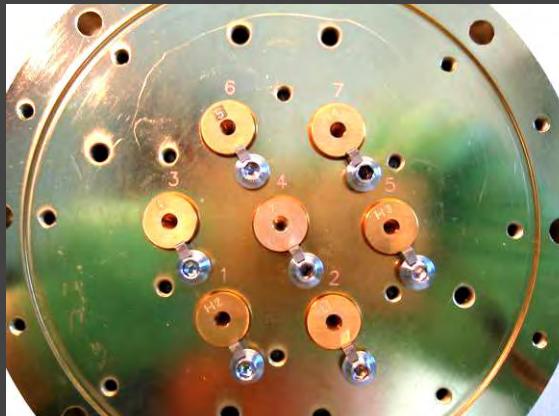

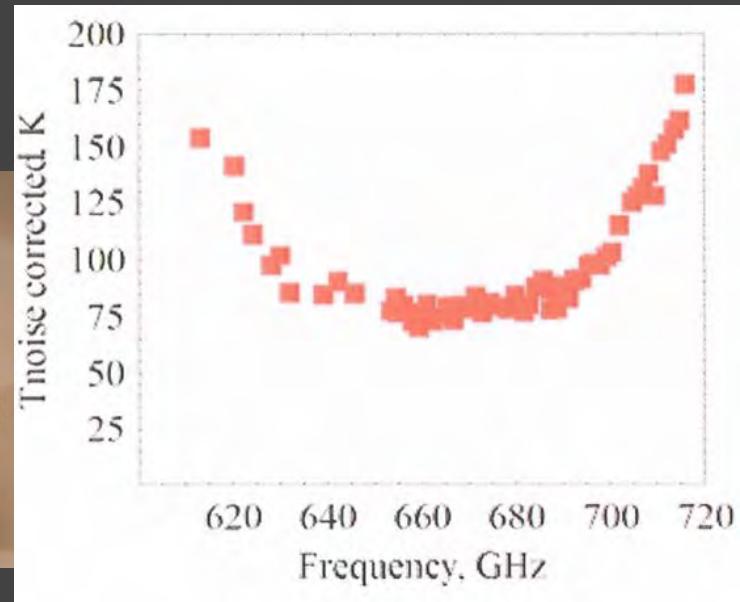

Receiver cabins: 2 Nasmyth + 1
Cassegrain

Mass: 125 000 kg

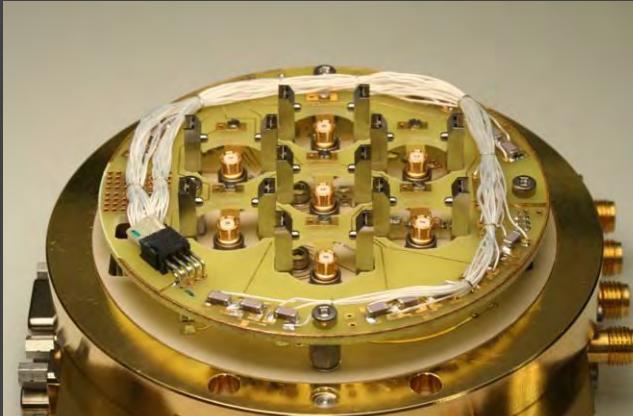

Manufacturer: Vertex Antennentechnik

SIS-Mixers

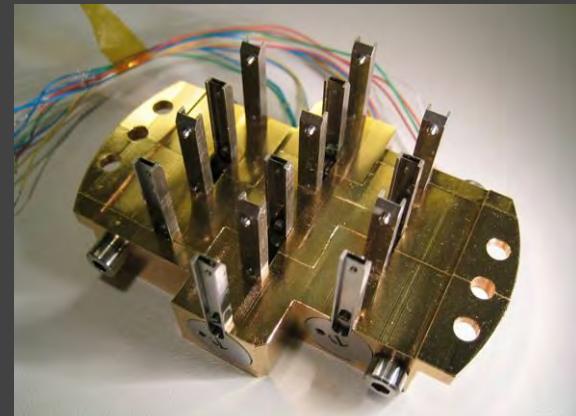

- THz SIS mixers
 - quantum-limited sensitivities
 - 600-720 & 780-950 GHz RF-bandwidth
 - 4-8 GHz IF bandwidth
- SIS junctions (TU Delft)
 - Nb SIS technology (660GHz)
 - Nb-NbTiN SIS technology (850GHz)
 - optimized fabrication
 - larger quantities
 - improved pattern accuracy
 - high reproducibility
- waveguide device mounts
 - optimized for series production
- corrugated horn antennas (RPG)

Mixers assembled to the mixermount at the university of Groningen

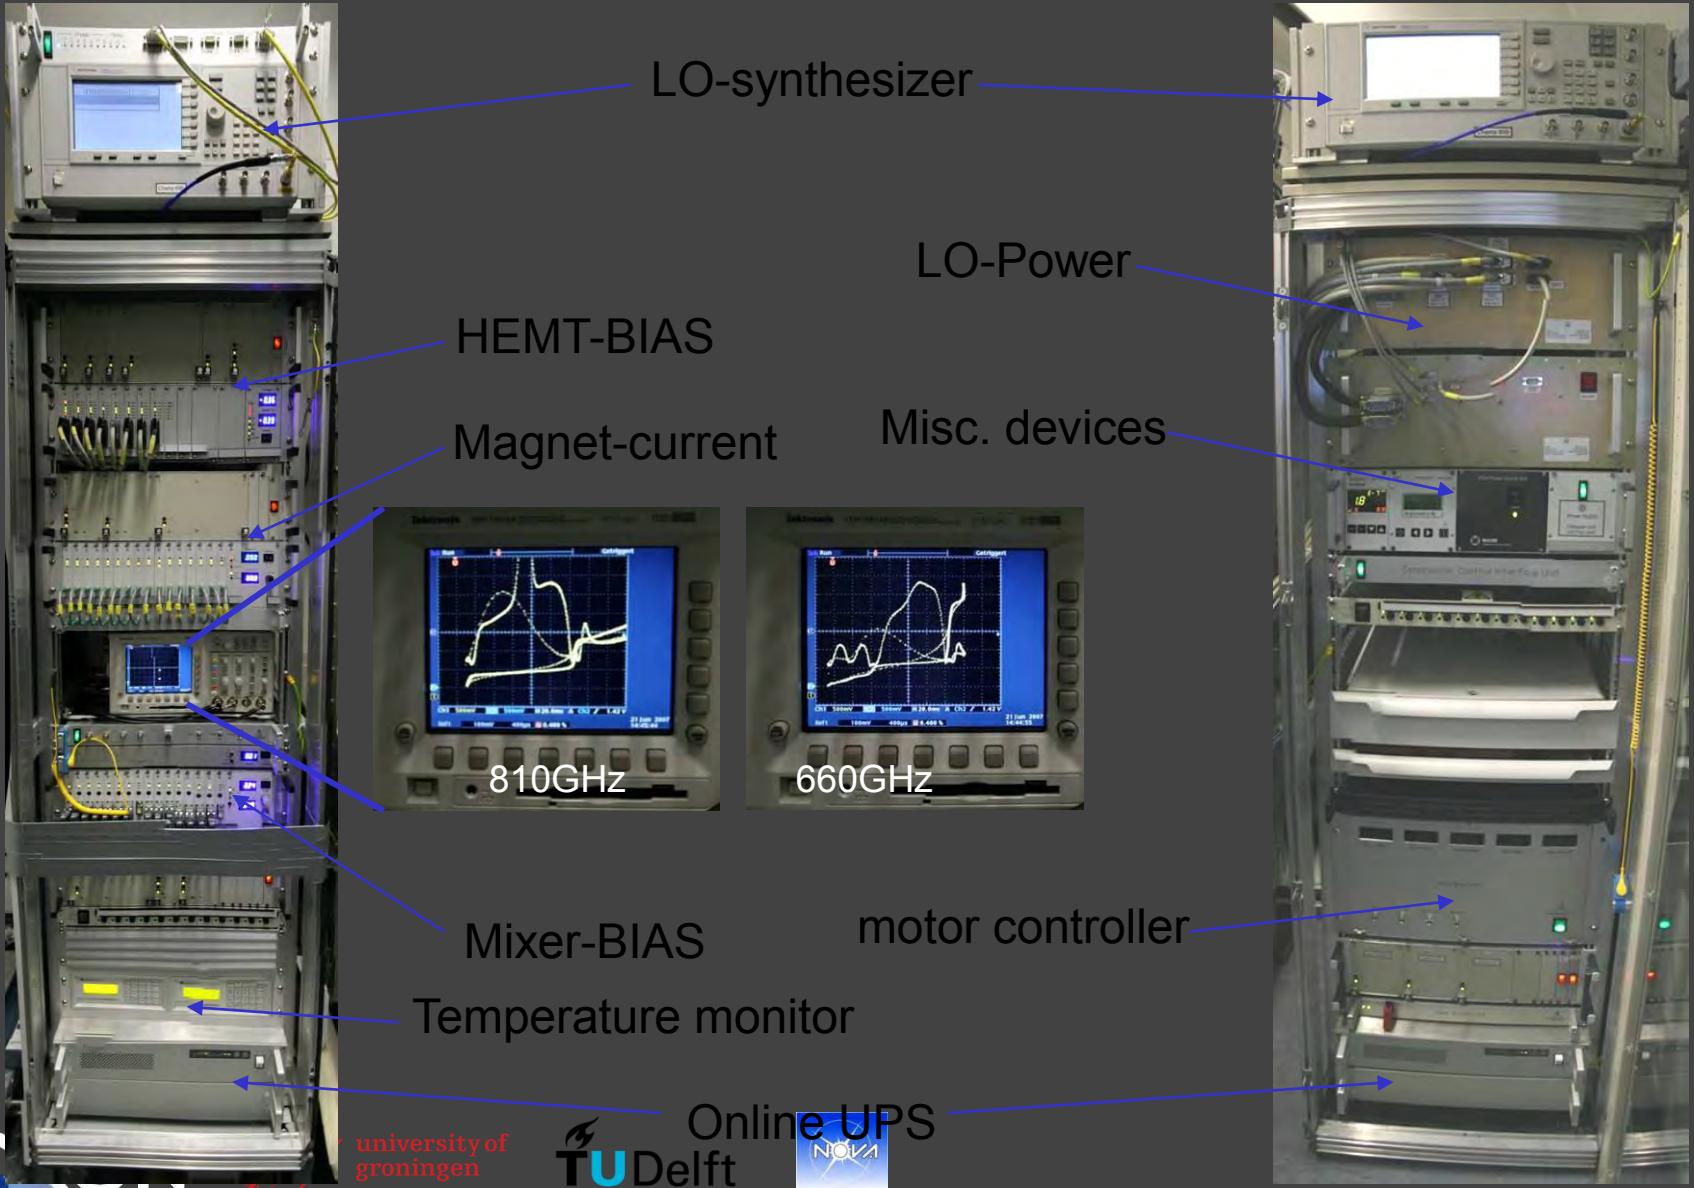

Mixer electronics with connector-block

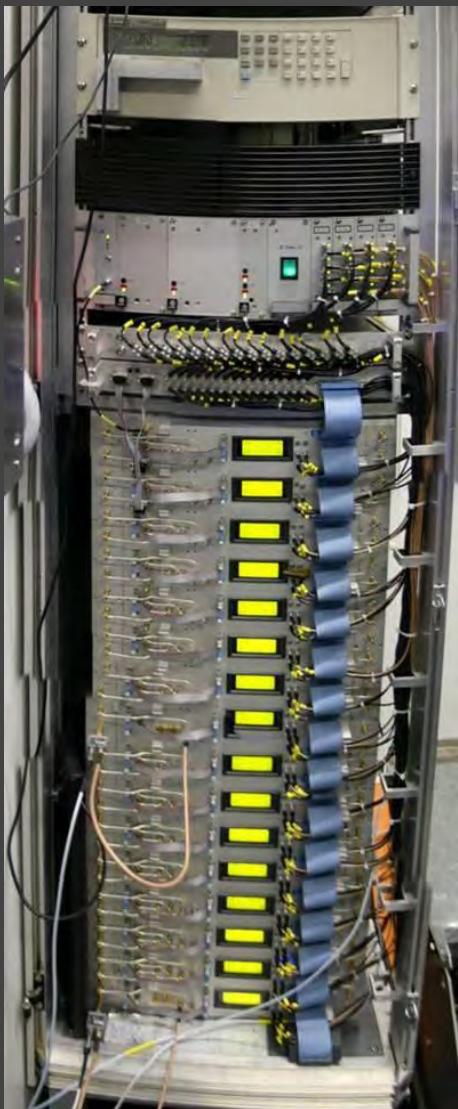

Magnet block

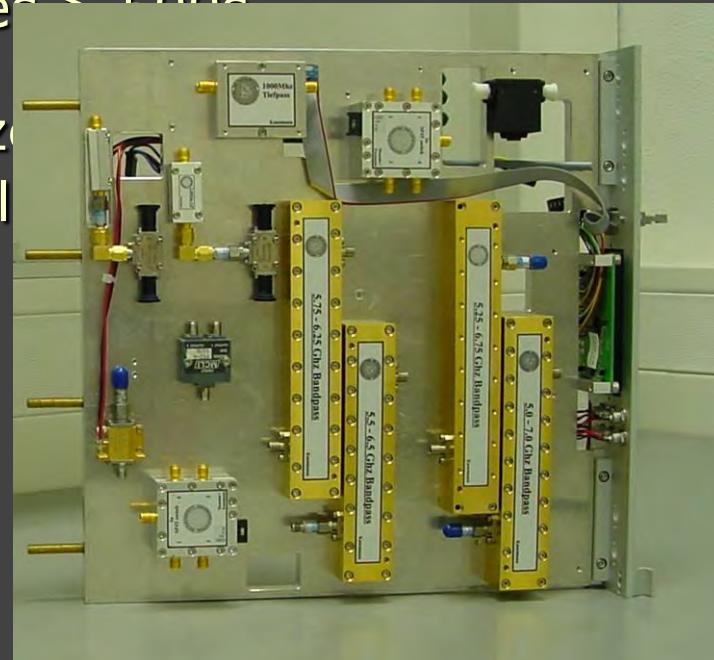

Control electronics

IF-Processor

- 14 input channels
 - IF bandwidth 4.625 – 7.475 GHz
- 28 output channels
 - output 0.05 – 1.55 GHz
 - individual output attenuator
 - total power detector
- Allan minimum time $> 500\text{s}$ (@ 1MHz resolution)
- temperature stabilized
- fully remote controllable

"New" backend: FFTS

Array FFTS (Fast Fourier Transform Spectrometer)

32 backend-channels, each providing

- 1.5GHz instantaneous bandwidth
- 8192 spectral channels
- to be installed at APEX in the next two weeks

more details: talk 6-7 of B. Klein:

"The Next Generation of Fast Fourier Transform Spectrometer"

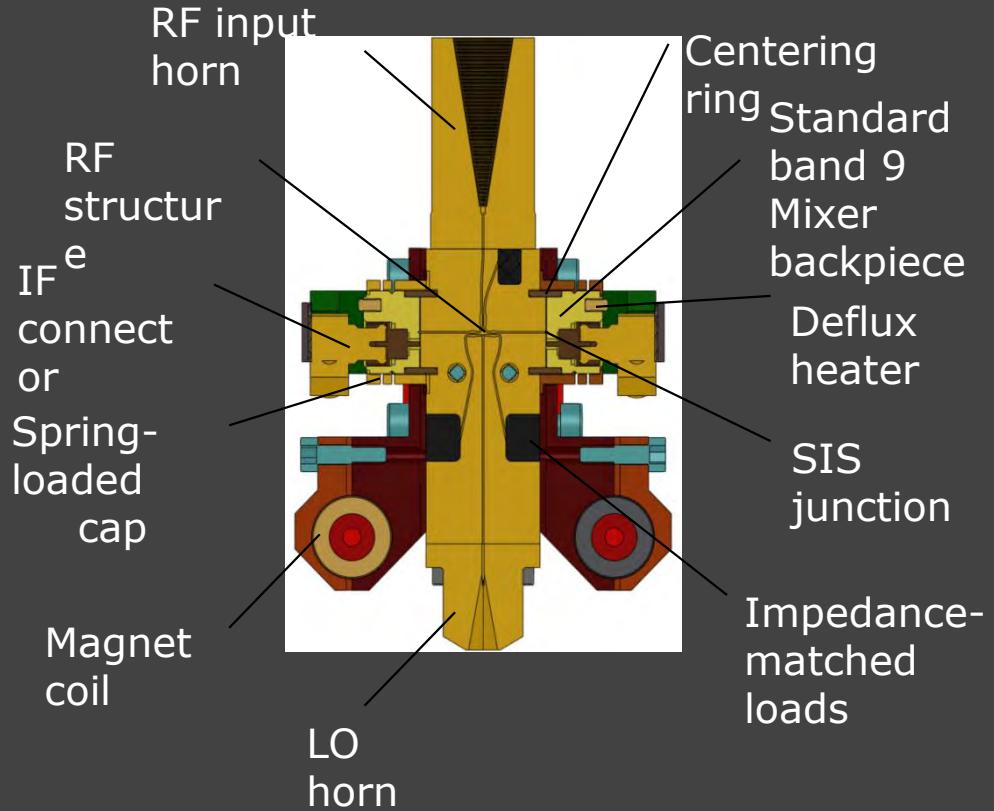

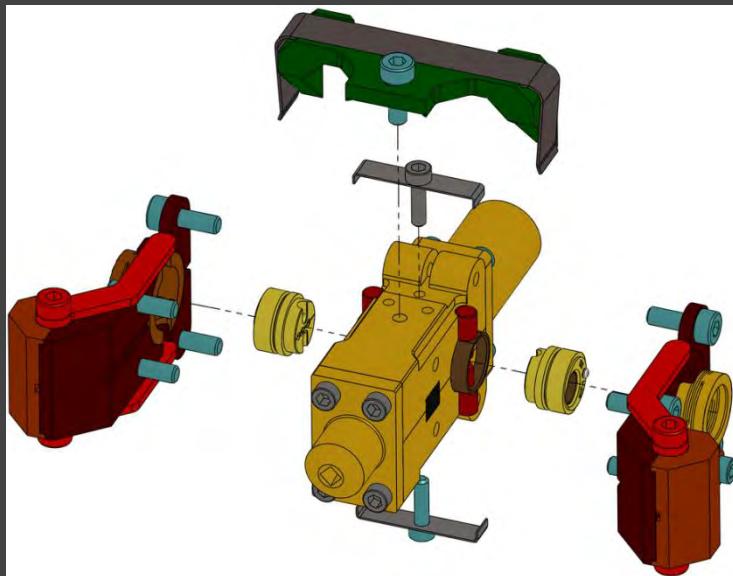

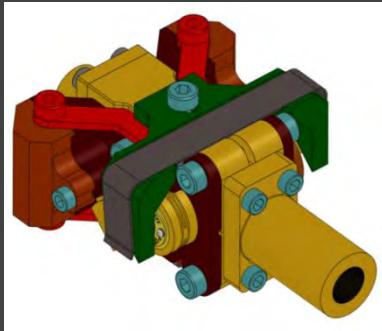

"Old" backend:

MACS auto-correlator system

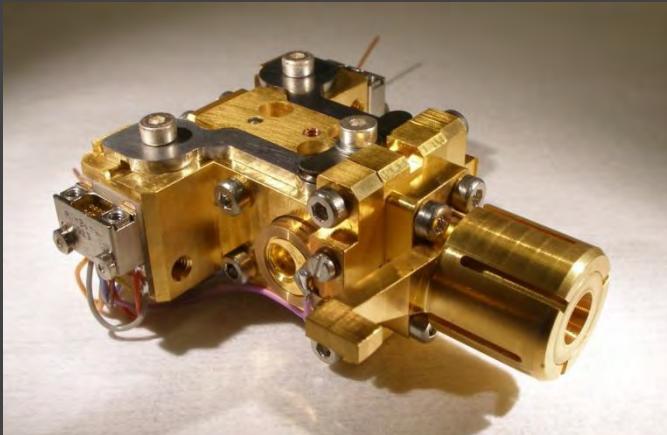

32 backend channels, each providing

- 1GHz instantaneous bandwidth
- 1024 spectral channel
- operational at APEX since January 2007

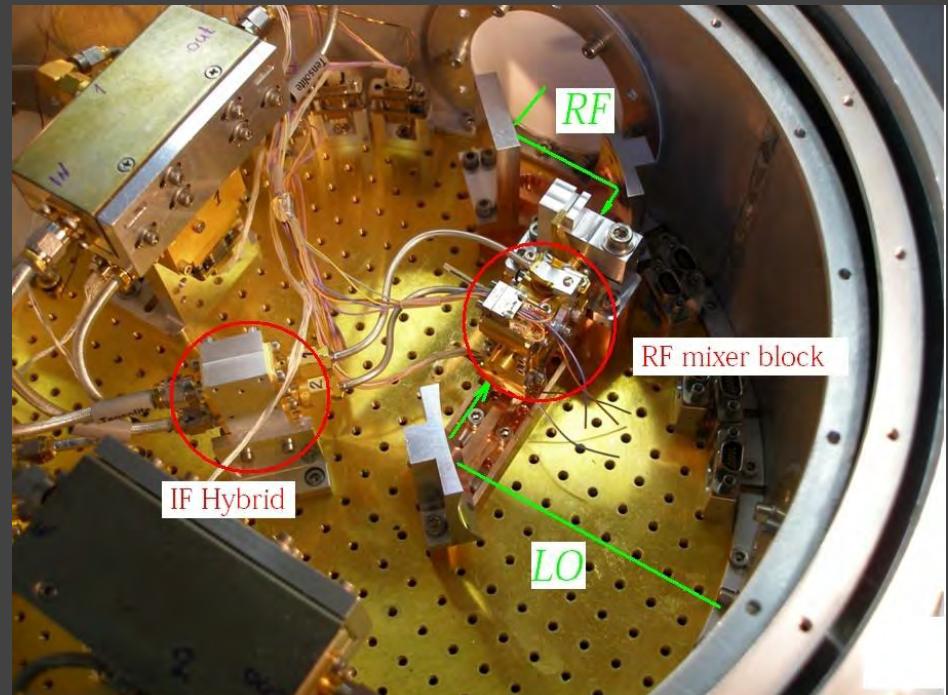

The mixer block - assembly

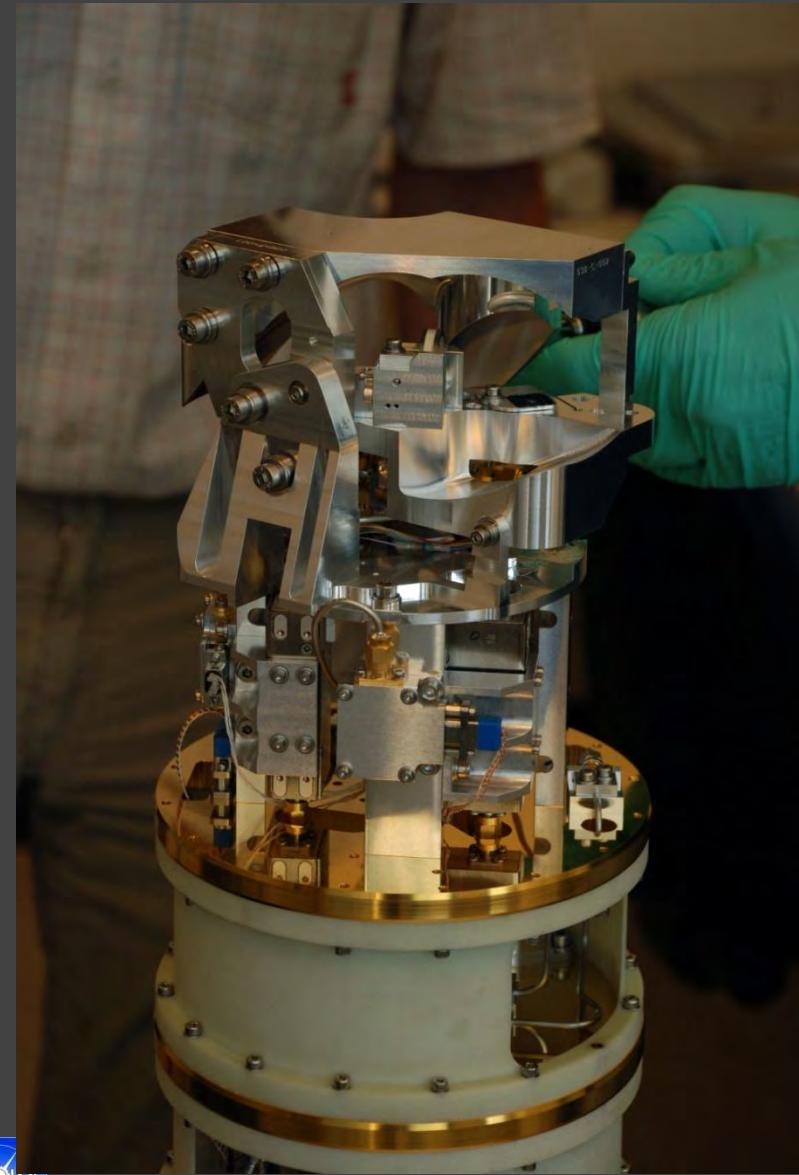

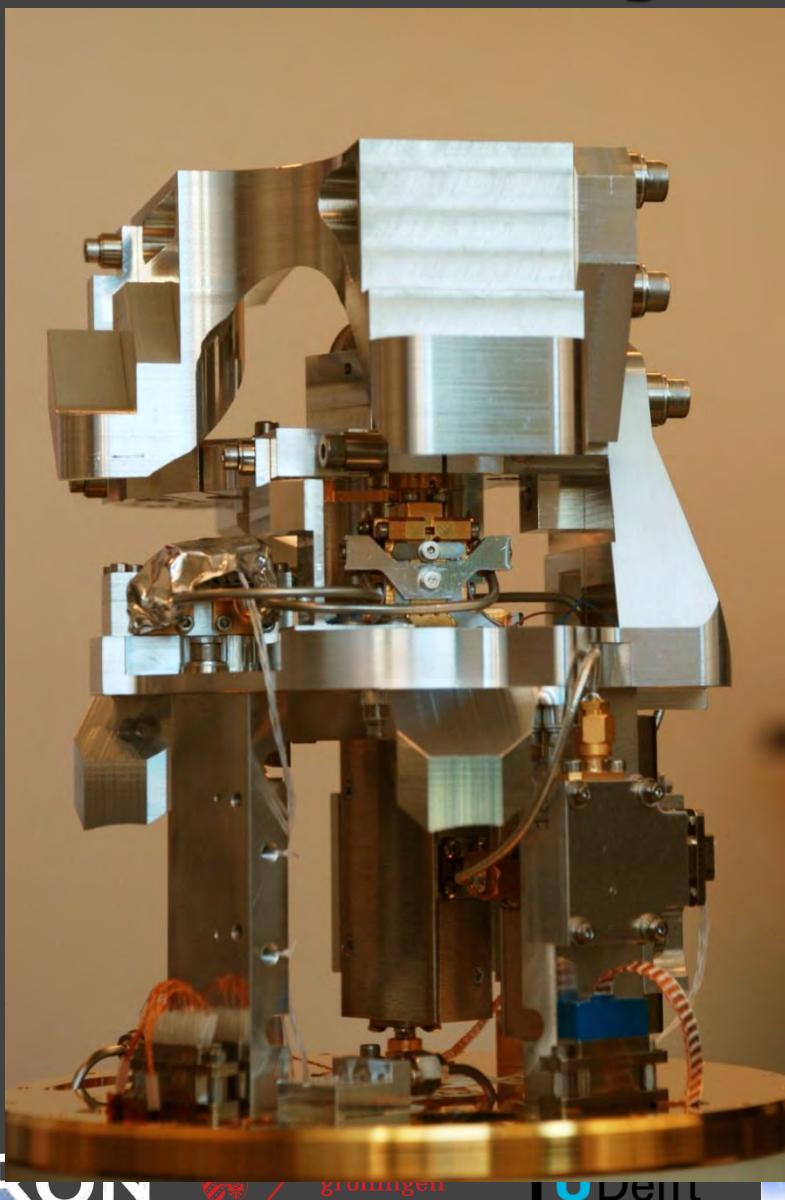

RF mixer Block

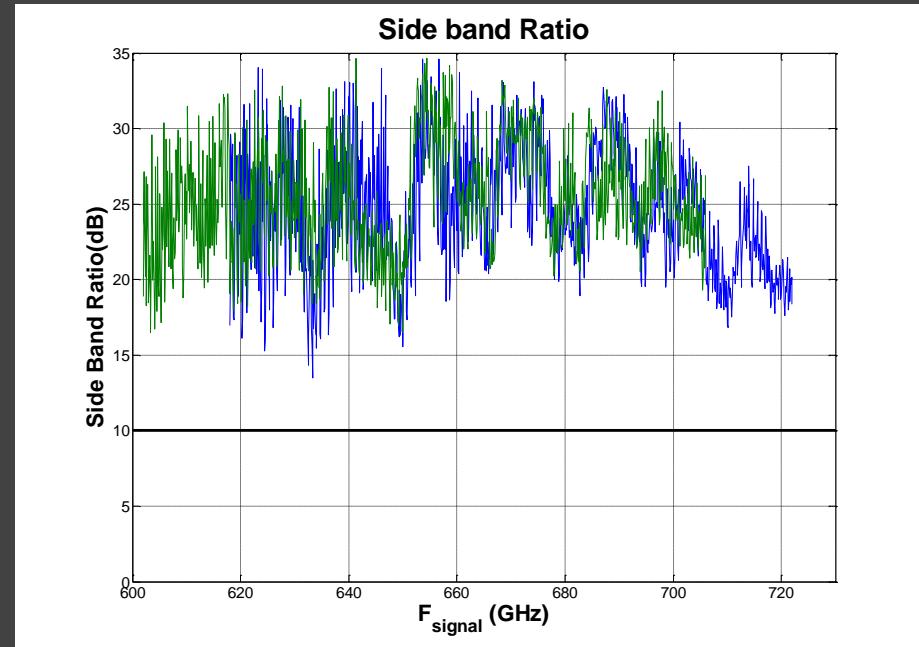

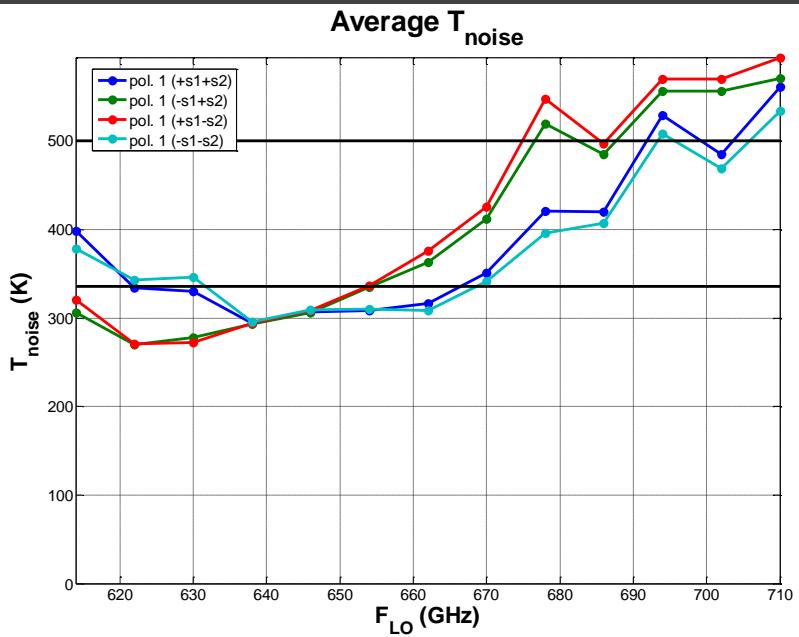

Block size:
45 x 21 x 53 mm³

2SB ALMA Cartridge!!!

2SB Cartridge. First tests.

- 1) Cartridge prototype – fabricated, works!
- 2) LO optics designed and approved
- 3) New 4-12 GHz Hybrid successfully tested

Conclusions

- Good performance large series DSB mixers have been demonstrated, base line for CCAT
- These can be used in large focal plane arrays
- 2SB mixer for ALMA band 9 has been demonstrated
- Ready for CCAT FPA (classical technology)
- Many challenges for real CCAT FPA >64 pixels
